

# Twist-Lock Storm Panel Clips Installation Instructions

Customer Installed 3D Printed Snow/Storm Panel Clips

Scan QR code or visit the Urban Coop Company Channel on YouTube for an instructional video.

3. Place clip body through hole in storm panel and force retainer into retainer slot starting from base side of clip body. Rounded side of body will be opposite of rounded side of retainer.

5. Position storm panel onto wire of coop panel such that **clip body with top at 12:00 Noon** slips through an opening in the welded wire. Clip will slide a little in each direction to accommodate aligning with an opening in the wire.

Locked Clip

# Retrofit Instructions

Using clips to supplement magnetic panels where sub zero blizzard wind gusts could reach tropical storm force (40-74 mph) and blow a magnetic panel off.

Scan QR code or visit the Urban Coop Company Channel on YouTube for an instructional video.

1

Leave magnets in place. With your existing panel in place, use a marker to mark the center of a hole in the wire where you intend for the supplemental Twist Lock Clip to be installed. If you have a Walk-In style coop, do it from inside. If not, just look through panel from outside and mark the spot in the center of a wire opening.

2

use twisting motion.

See below for recommended placement suggestions. One clip will hold smaller and medium sized panels in place, on the largest panels, you can install two.

Lay the panel flat onto a scrap piece of wood or a cutting block. You'll be making a 3/4" hole over the mark you made in step 1. We suggest using a **3/4" General Tools Steel Punch** which you can purchase online for between \$10-\$20. Use your tool to create the 3/4" hole. You could also cut or carve the hole with a sharp knife but the punch will make a more perfect hole.

General Tools 3/4" Steel Punch

**Next - Follow the instructions on the front side to install the clip after making the hole.**

**Note: Drilling hole with a drill bit will most likely shatter your storm panel.**

Suggested placement of Twist Lock Clips for supplemental attachment of magnetic style panels.
